

Adjustable Rack

Catalog # 33951

The Adjustable Transport Rack can be used for transporting animals across the lab or the country. The height of the cages can be adjusted 15" up or down to facilitate the transfer of animals from one cage to another.

The raising and lowering of cages can be accomplished by the use of a hand crank or with an electric variable speed drill.

The sliding doors on the front fold to the side when transferring animals.

Each cage has food and water provisions, removable waste trays, and latches with means of locking.

Cage Specifications:

All Stainless Steel Material

Suitable for 250F Autoclave

Heavy Duty Casters, locking on front

The center divider can be removed for pairing or when transporting larger animals.
